ABSTRACT

The invention relates to a cable storer having a housing wherein a cable is arranged. The housing has at least one cable inlet area and one cable outlet area. The cable is arranged in the housing in essentially concentric circles and enters the housing via the cable inlet area and exits via the cable outlet area. The cable inlet area and the cable outlet area are arranged on the outer periphery of the housing. The cable is introduced according to a configuration selected in such a way that parts of the cable are predrilled in respectively different directions.
